

## Problem Statement 1

### TestCases

Question 1.You have to write test cases to test Sign-up functionality.

1. Verify the messages for each mandatory field.
2. Verify if the user cannot proceed without filling all the mandatory fields.
3. Verify if the numbers and special characters are not allowed in the First and Last name.
4. Verify if a user can sign-up successfully with all the mandatory details.
5. Verify if a user can sign up with the valid details.
6. Verify if a duplicate email address will not get assigned.
7. Verify that hints are provided for each field on the form, for the ease of use.
8. Verify if a user cannot enter the characters more than the specified range in each field.
9. Verify if the font, text color, and color coding of the Sign up page is as per the standard.
10. Verify that the user is agree with the terms and conditions and they read it carefully.
11. Verify if terms and condition checkbox is not selected by default.
12. Verify if a duplicate phone number will not get assigned. Verify the phone number: Send OTP to the entered phone number after a successful validation.
13. Verify the time taken to send an OTP on the registered phone number.
14. Verify the signup page for both, when the field is blank and the Register button is clicked.
15. Verify if the signup page is responsive on different screens.
16. Verify the Signup page and all its control in different browsers.
17. Verify the Onboarding Screen.

These are test cases which include functional,UI,Non-functional,Browser Compatibility testing.
